WHAT WE DO

Three ways to work with us.

One team of 70+ specialists in the US, Estonia and Ukraine. Hand us a product to build, add our engineers to your team, or sell our work to your clients.

The choice is not forever: a product we build can later move to engineers who work under a CTO you hire.

01

Outsourcing

→

We build your product, end to end.
For a company with no engineering team, or with a full one.
Websites from \$499, apps from \$5,000

02

Outstaffing

→

Our engineers join your team.
For a team with a lead and a process that needs more hands.
From \$35 an hour, by the role

03

Partnership

→

Your clients. Our engineers.
For agencies, studios, consultants and recruiters.
Your price, or 10% for a client you bring

We build your product, end to end.

A full team from discovery to release: a project manager, designers, developers, QA and DevOps. You set the priorities and see working software every two weeks.

IT FITS WHEN

- You want a product built and have no one to run engineers.
- Your team is full, and the product cannot wait for hiring.
- Another company built your site or app, and it needs someone to look after it.

2 weeks

to a working demo, then a demo every two weeks

1 call

free, with a rough estimate after it

1 contract

with our US company for the website, the apps and their hosting

WHAT WE BUILD

Websites from \$499	Web apps and SaaS from \$5,000
Mobile apps from \$5,000	AI: chatbots and automation from \$500
Audits: site, code, security Basic audit free	Cloud, security, compliance Individual estimate
IT support from \$29 a month	Custom software Individual estimate

Development is paid every two weeks for delivered work, or by milestones on a fixed price that cannot grow for the agreed scope. A website from \$499 is a fixed package, paid upfront.

IT outsourcing →

Our engineers join your team.

They take tasks from your backlog, commit to your repository and report to your lead. We handle their hiring, payroll and equipment.

IT FITS WHEN

- You have a lead and a process, and capacity is the bottleneck.
- One skill is missing: a mobile developer, a DevOps engineer, an AI engineer.
- A separate track needs a squad: a mobile app, an AI feature, an internal tool.

1 week

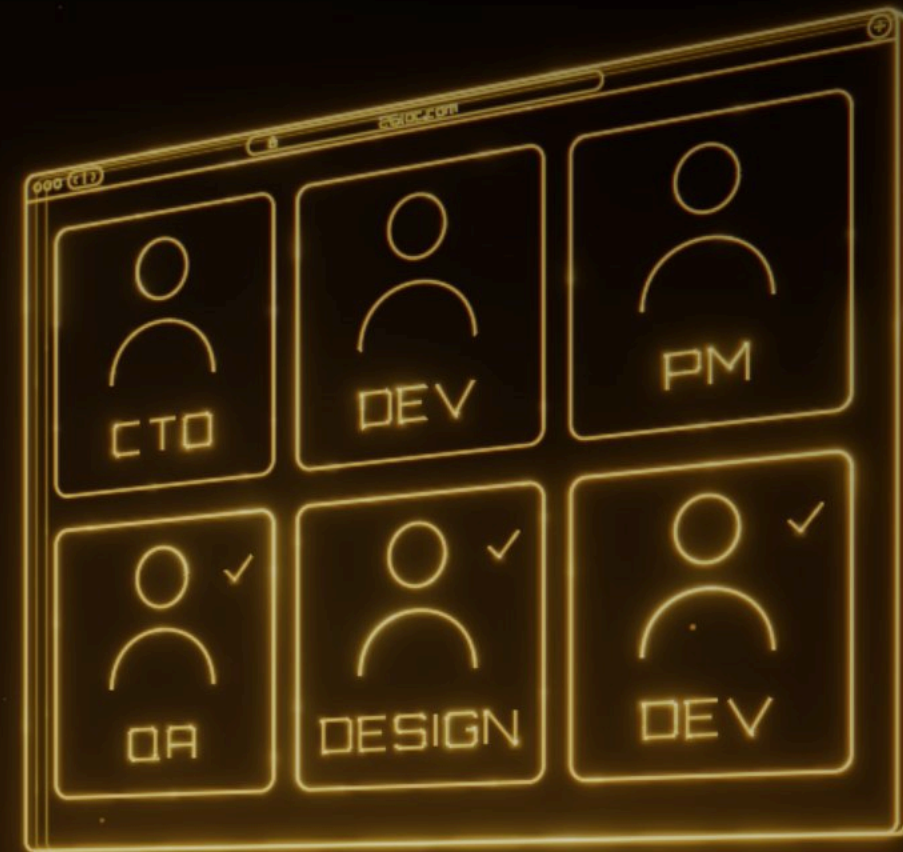

to candidates and the start, usually

\$35 an hour

to start from, at the rate of the role

70+ people

engineers, designers, QA, DevOps and managers

WHO CAN JOIN

Developers for web, mobile and AI, QA and DevOps engineers, UI/UX designers, project managers and a CTO.

THE STACK THEY BRING

React, Next.js and Vue; Django, FastAPI and Laravel; Swift, Kotlin, Flutter and React Native.

HOW A PERSON IS CHOSEN

Each has passed our screening and a technical interview; you interview them or give a short test task.

ONE PERSON OR A SQUAD

The team grows or shrinks as your work changes, without hiring or layoffs on your side.

Staff augmentation →

Your clients. Our engineers.

For agencies, studios, consultants and recruiters: take on more projects without hiring, or bring us a client and earn on every project.

IT FITS WHEN

- Your agency sells more than its team can build.
- Your clients ask for software you do not build yourself.
- You know a company that needs software, and want a share without running the work.

10%

of every payment we receive for a client you bring

150+

projects

delivered since 2017: the record behind your name

5.0

Clutch

26 verified reviews, not one negative

01 White label

We build under your brand. Your agency stays the face of the work and the one your client talks to.

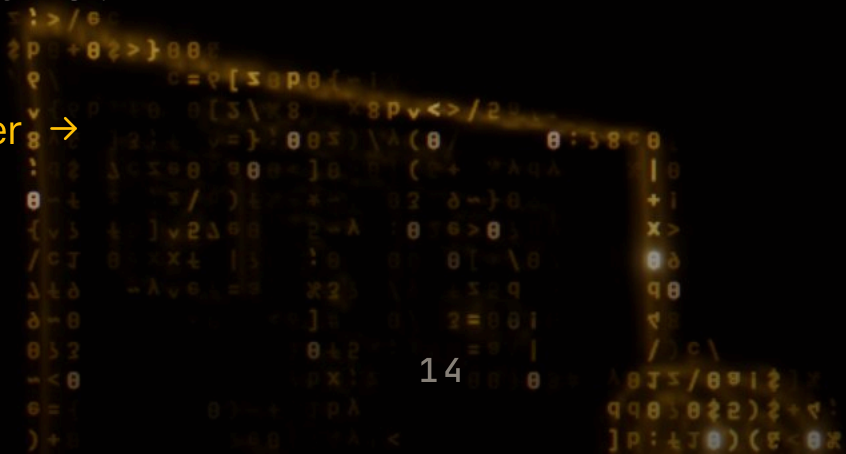

02 Our engineers, your client

We provide the engineers; you or your client run their tasks, at the price you set.

03 Referral

You introduce the client; we run the sale and the work, on every project, not only the first.

Become a partner →

Documentation first. Our tester last.

Websites and MVPs are built with AI tools, on a pipeline where every step is written down and checked by people.

- 01

Documentation first
The product, its pages and its rules, written down before any code.
- 02

Planned tasks
Small tasks, each with its own definition of done.
- 03

Built and checked
Each task built with AI tools and checked against it.
- 04

Code review
An engineer reads the code: structure, security, mistakes.
- 05

Final QA
Our tester goes through the whole product before you do.

HOW IT GOES

A clear start. A demo every two weeks.

01 Initial call

We learn your goals, requirements and timeline, and check that we are the right fit.

02 Q&A and rough estimate

You get a ballpark of time and cost to plan the next step. Free.

03 Agreement

Scope, budget and timeline fixed in a clear contract.

04 Discovery

Research and planning: final requirements, design and technical approach.

05 Build and release

Two-week sprints with a demo each time, then deployment and support.

WHEN IT COMES

A working demo two weeks after the start, then every two weeks; the release date is in the estimate.

HOW IT IS PAID

No upfront payment, as on all outsourced development and staff augmentation: every two weeks for delivered work, or by milestones on a fixed price.

YOUR WAY OUT

The first week is on us: if it does not work for you, you stop and do not pay for it.

✓ No upfront payment

✓ First week on us

✓ Direct line to developers

WHAT IT COSTS

What would it cost?

Prices to start from, and a 3D website like this one at a fixed price. Most projects get an individual estimate: free, in writing, before any contract.

Starter website

from \$499

+ \$29 a month, billed annually

3D website

\$10,000

fixed, a site like this one

Mobile app

from \$5,000

iOS and Android

Web application

from \$5,000

portal, SaaS, dashboard

Developers

from \$35 an hour

depending on the role

Custom software and the rest

Individual estimate

free, before any contract

Outsourced development and staff augmentation: no upfront payment, and the first week on us.

REVIEWS

5.0 on Clutch. 26
verified reviews.

“

Being in the technology sector, I almost never partner with external teams. But when we needed extra bandwidth for a project, I took a personal recommendation and have been pleased with my collaboration with DTEAM.

Lee Blaylock

Co-Founder, ConstructionBevy and Annandale Capital - Dallas, Texas ·
